March 24, 2015

# content

- ▶ machine learning
- ▶ single label classification
- ▶ multilabel classification
- ▶ structured output learning
- ▶ future work
- ▶ what can we do

# Example: dog vs. cat?

- ▶ We have 5000 pictures of dog and 5000 pictures of cat.

- ▶ Computer digitalize each picture into  $100 \times 100$  pixels.
- ▶ Given a new picture, we want to answer: is it a dog or a cat?
- ▶ Simple task for human, dog, or cat.
- ▶ Golle (2008) claimed this is a difficult task for machines with only 82.7% accuracy.
- ▶ In 2013, 98.5% accuracy was reported in a Kaggle competition (<https://www.kaggle.com/c/dogs-vs-cats>).

# Why?

- Is the human verification system safe from machine learning attack.
  - CAPTCHA vs. ASSIRA

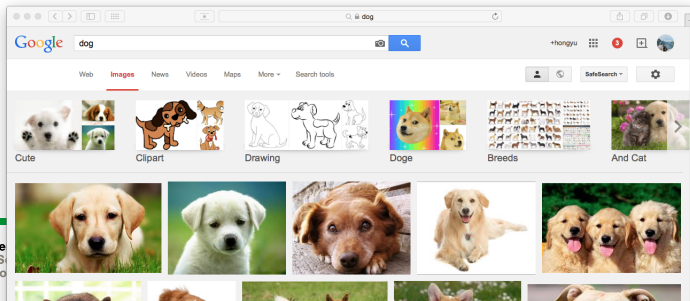

Asirra

Asirra is a human interactive proof that asks users to identify photos of cats and dogs. It's powered by over two million photos from our unique partnership with [Flickr.com](https://www.flickr.com/photos/assira/). Protect your web site with Asirra — free!

- If machine can assign correct label to all pictures, we can google.

# Future work

# To get benefit?

- ▶ Fingerprint identification
- ▶ Voice recognition
- ▶ Information assistant

# To contribute?

- ▶ SETI@home
- ▶ Rosetta@home
- ▶ Foldit

# Bibliography
